

TravelTrust Whitepaper

Ethereum mainnet · TTG V9 · solc 0.8.37

General information. Not a prospectus, not an investment memo, not a securities offering.

This paper follows TravelTrust Web3 Release Notes V2 live mainnet contracts. Deployed contracts are not an open public sale, and the App is not store-listed.

Abstract

TravelTrust is an escrowed travel network. Trip deposits enter Circle-issued USDC escrow. Principal releases after the traveler confirms the trip. TTG is a fixed-supply governance token used for votes, public sale, and steward metering. It is not a stablecoin and it does not replace USDC deposits.

Booking, marketplace, messages, activity, and profile live in the traveler App. This website is token, team, channels, and legal disclosure. The App is not on the Apple or Google stores yet.

Product boundary

Surface	Does	Does not
Official www	Token facts, verification addresses, sale plan, team, paper, legal pages	Does not create trips or invent store buttons
Traveler App	Booking, market, messages, activity, account	Does not take TTG as trip collateral
Protocol	Escrow, settlement, primary market, governance gates	Does not promise yield or dividends

Until a sale window is open, the quote card does not send a purchase. A published plan is not a live fill.

TTG token

Item	Fact
Supply	25,000,000,000,000 TTG
Decimals	18
Mint	No additional mint
Compiler	solc 0.8.37
Chain	Ethereum mainnet (chain id 1)
Live 01	0xd9965802ff0A9DAB5d0E13392dA797cd6D13ee51

Genesis split: public 50%, DAO 35%, team 3%, marketing 5%, treasury 7%. Public 50% is the genesis cap. The published five rounds release about 3.905% of supply. Unsold remainder may be burned in part. A burn is not price protection. The activity treasury starts at 0 and needs a later governance transfer. It is not a genesis pre-deduction.

Retired TTG addresses are not the live pin.

On-chain verification

The 01 TTG contract can be opened on Etherscan. The homepage lists three addresses, which is the industry pattern. Token Info / Logo status is whatever Etherscan currently shows. This page does not claim that review has passed.

Item	Address	Note
01 TTG	0xd9965802ff0A9DAB5d0E13392dA797cd6D13ee51	Governance token. Contract address can be opened on Etherscan
06 Primary market	0xaB1D74A62e3fBB1c140a9Dfa9bB5b7Fe3F8C7e46	Conversion counter after a window opens. Not the token
09 Circle USDC	0xA0b86991c6218b36c1d19D4a2e9Eb0cE3606eB48	Trip deposit and conversion asset. Issued by Circle, not deployed by TravelTrust

Governance gates (not payment addresses):

Item	Address	Note
02 Governor	0x69fF62475C3ed36B3B8627BfEC980b3047B3bf42	Holder votes (~7 days)
03 12h Timelock	0x2Cb9f0FD770B50931f0a4cd463113bBA39331acb	43,200-second delay before execute

Slot 08 is vacant this batch. Operator EOAs are not listed on this website. Three homepage addresses match token / counter / settlement-asset disclosure. They do not by themselves pass an Etherscan logo review: matching mailbox, site, logo, and working socials are still required. This page does not claim the review has passed.

Sale plan

Five short windows at 09:00 UTC. Until a window is open, the quote card does not send a purchase. Round 1: 1 USDC = 1,000,000 TTG. Minimum 1 USDC per round.

Round	Amount (TTG)	Plan price (USDC / 1 TTG)	UTC window
Genesis calibration	1,250,000,000	0.000001	2026-11-12 → 2026-11-19 (7 days)
Community early bird	6,250,000,000	0.000003	2026-12-03 → 2026-12-17 (14 days)
Builder round	31,250,000,000	0.000005	2027-01-14 → 2027-02-04 (21 days)
Public round	312,500,000,000	0.000007	2027-02-25 → 2027-03-27 (30 days)
Final public round	625,000,000,000	0.000009	2027-04-08 → 2027-05-23 (45 days)

USDC from sales enters the project pool. Unsold remainder of a closed round returns to the public-sale vault. Burns are optional. They are not automatic and cannot be done inside the counter.

How trip money moves

Buying TTG and paying a trip deposit are different transactions.

1. New orders accept only the published ten jurisdictions.
2. Both parties scan and lock Circle USDC in that escrow.
3. Principal releases after the traveler confirms the trip. The guide does not sign release.
4. Default protocol fee is 5% of the deposit (fixed at open; hard cap 10%). With a seated region steward, the fee split follows published rules; with no steward it enters the project pool.
5. Do not send funds to unpublished addresses.

Governance

Rule changes: holder proposal → ~1 day delay → ~7-day vote → then the 12-hour timelock. Do not describe the 7-day vote as 12 hours. Some allow-listed operations may be queued directly into the 12-hour gate. After the delay, anyone may execute. Ability to queue is not an open public sale.

Traveler App

Five tabs: Home, Market, Messages, Activity, Me. Trip creation stays in the App. TTG conversion is the allowed exception that may open this website. Until store listing, this site keeps an “in development” slot and does not invent store buttons. Stills on the website are previews, not live store screenshots.

Risks and open items

- Crypto assets are volatile. Holding TTG is not a dividend and does not make you a region steward.
- No independent audit PDF is published yet. Internal design locks are not a third-party audit.
- Sale windows are not open to the public.
- The App is not store-listed.
- A public issuance approval has not been made.
- Do your own research.
